

BIORESONANCE MODULATOR

**Manual
user**

General description

The bioresonance modulator (BRM) is a universal crystal-based device for obtaining direct access to the energy-information space (GEIS).

Recently, the rhythms of existence on Earth have accelerated significantly, especially in the social environment, especially in the space of megacities. Each person can notice that if earlier there was enough time for a lot (self-education, reading, poetry, music lessons, etc.), now it is barely enough for the most necessary (material support of their needs).

The global energy information space (GEIS) has long been not limited to primitive mass media, and at present it is continuously becoming more sophisticated and improved. The consciousness of a modern person is not able to process the continuous flow of information coming from all sides.

Unprocessed information begins to accumulate in the subconscious, occupying a "useful volume" and blocking the internal resources of a person. That is why the ability of human consciousness to resonate with higher frequencies, or directly interact with the information space, is a necessity for effective adaptation of a person to the accelerating rhythms of life.

At the moment, GEIS is a complexly ordered multi-level network that includes the entire satellite system, virtual Internet space, a system of cell towers, ultra-powerful radio telescopes and radars, digital communication devices, which, and even more than one, is possessed by almost every modern person.

And since most digital devices, at the core of their logic, have the ability of artificially grown crystals (for example, silicon) to pass current in one direction and not in the other, then we can say that the GEIS is of a crystalline nature.

Every person interacts with the GEIS on a daily basis through digital communication devices (DCD) - a phone, a smartphone, a laptop. But this interaction is carried out indirectly, using the built-in

functionality (pressing a button, touching, voice command), and therefore is ineffective.

Scientific research in the mid-2000s showed that the effectiveness of such interaction is only 6-7% of all energy-informational capabilities of the device, while the average person spends up to 80% of not only working time, but also leisure time on it.

BRM is a connecting link, a conductor, between a person and a DCD, included in the GEIS. BRM makes it possible, to a certain extent, to directly influence the information field at the energy level. BRM allows you to interact with the DCD, bypassing the built-in command functions of the device, using the consciousness of the DCD, which is a part, a cell of the GEIS.

The creation of BRM became possible as a result of a number of scientific discoveries in recent years, as well as the already known unique properties of certain crystals. It is known that crystals are the most ordered and also the simplest form of matter in the Universe. Crystals can be called natural energy resonators.

In 2012, Philadelphia geneticist Dr. Hakon Hakonarson discovered that human DNA (Deoxyribonucleic acid) is essentially a crystal. Moreover, a person is all composed of crystals and there are 10^{40} of them in the human body. His discovery was confirmed by studies of plasma crystals already by Russian cosmonauts in 2013. A number of scientific works of the late 2000s proved that crystals have virtual memory and are capable of holding a huge amount of information.

This information can be any setting, desire, intention, goal of the BRM operator, which at the energy-information level is an electromagnetic oscillation. It can be anything: the desire for a large and luxurious apartment; travel to different countries; high level of well-being; own business; self-confidence; high endurance, learning ability; a young, strong and healthy body; fantastic sexual sensations; harmonious personal relationships ...

On the other hand, a natural BRM crystal can transmit a signal at the same frequencies as an artificial DCD crystal (which does not have a full-fledged ability to resonate with human energy, but has a perfect structure and has great technical capabilities). The signal modulated by

your desire will be broadcast in the information field whenever the DCD has a connection with the GEIS - for example, when someone calls you on your mobile phone. You can use any type of BRM for any purpose, but an accurate selection of parameters will make the realization of your desires most effective.

BRM is a device capable of providing an energetic connection between inorganic and human consciousness. BRM will allow you to open the doors to a wonderful world, hidden from the senses, but really existing and having a huge impact on the life of a modern person.

The principle of operation of the BRM

BRM consists of two key parts: a natural crystal with special parameters and a resonator dipole antenna.

The exit point in GEIS is a digital communication device based on artificial crystals (DCD) - a mobile phone, a smartphone. BRM is made in the form of a sticker and can be repeatedly attached to the body of a mobile phone.

The principle of operation of the BRM is reflected in diagram 1.

Diagram 1.

We see that this scheme has four links:

OS - organic consciousness, man. For inorganic consciousness, a person looks like a complex system that includes both the human body and its bioelectromagnetic fields.

BRM is a bioresonance modulator based on a natural crystal connected to a resonator dipole antenna.

DCD is a digital communication device based on artificial crystals (mobile phone, smartphone).

GEIS is a global energy-informational space or “inorganic consciousness”.

It also has three connections:

1. OS → BRM

Accumulation, storage by a natural crystal of subtle vibrations of thoughts, feelings, verbal vibrations of a person. It can be anything: the desire for your own business, a flow of abundance, a beautiful and healthy body, sexual energy, personal relationships, etc. for yourself or another person. Communication is always active when the BRM is in the human field, especially with direct tactile contact.

2. BRM → DCD

Transfer of the accumulated information from the natural BRM crystal to the artificial DCD crystals. Communication is always active when the DCD is on.

3. DCD → GEIS

Broadcasting of a signal modulated by more subtle vibrations of attitudes, human intentions within the global information network. Communication is always active when the DCD emits a signal, especially during a call.

All you need to get direct access to the energy-informational reality is to stick the BRM on your mobile phone or smartphone.

How to work with BRM

1. Stick BRM on the phone case

It can be any of your old phones, but it is better to use the one you just purchased. It is known that everything that a person considers his property and to which he actively directs his attention is saturated with human energy.

This information is usually modulated by the thoughts, desires of the person, or the dominant attitude towards the object at the moment. It could be a new outfit, a new car, an expensive wristwatch, a suburban real estate, or even a new sexual partner.

It is unlikely that now it is possible to find a material object, which is paid more attention and which is in the field of man more than a mobile phone. All owners of new digital devices are familiar with the phenomenon of “energy connection”: it is enough to remember your attitude to the newly acquired device.

At first, a lot of attention is paid to the device, there is a strong concentration of attention on the process of exploring the functionality and features, it literally does not let go, soaked in the energy of joy from possessing something new.

All this is a process of positive energetic connection with the DCD, emitting high-frequency electromagnetic oscillations and having a direct output to the GEIS. Therefore, it is good when the impulse of the energetic connection with the BRM occurs simultaneously with the new DCD.

2. BRM activation

BRM is activated automatically after a few * days, being in the human field. But if you want the BRM to start perceiving your subtle vibrations immediately, follow three simple steps to activate.

I. Take the DCD with the glued BRM between the palms so that the fingers do not touch. Find a comfortable position so that neither your hands nor your shoulders are tense. It is better to close your eyes.

II. Concentrate your attention on the BRM crystal. Simultaneously with the concentration on the crystal, you can begin to radiate (imagine / feel / speak **) your desire, attitude.

III. As you continue to focus on the crystal, notice any changes in sensation. This can be a slowdown in mental activity, the appearance of a trance state, the appearance of images, physical sensations: the appearance of a feeling of a “magnet” (attraction or repulsion) between the palms, a slight tingling sensation, a feeling of “emptiness” in the center of the palms, a feeling of expansion of the body, etc.

Do not fantasize and do not try to suggest anything to yourself, just watch the changes as if from the outside. A change in sensation indicates that the crystal is activated.

* depending on the type of BRM

** depending on the type of BRM

3. Forming intention

Express your desire clearly or speak the mindset that you want to convey to the GEIS. Better if you write or sketch it. If the predominant communication channel for your type of BRM is visual, then the image should be detailed and clearly drawn.

Remember that the language of crystals in GEIS is a language of matrices, that is, numbers, which “does not understand” allegories and ambiguities. Imagine that you are trying to convey a desire to a child. It is often necessary to include in your intention a way of fulfilling a desire (positive transformation, self-improvement, actions of certain people, a gift, a purchase, etc.) GEIS as a system operates according to the principle of the shortest path and saving energy.

It may happen that the simplest way of materializing an intention for one reason or another does not suit you. If you use BRM for another person, make sure that he knows these points and will be responsible himself.

It is recommended to experiment with general settings first:

Example 1. “I attract wealth and success like a magnet”

Example 2. “I am in a stream of abundance and well-being”

Example 3. “My body radiates youth, sexuality and health”

Example 4. “My material wealth is stable and sufficient for all my needs, leisure, travel”

Example 5. “I am in a harmonious personal relationship with my beloved man / woman”

And then, having gained some experience, you can write down specific desires and intentions in the GEIS, taking into account all the circumstances.

These, of course, are only examples, each person must derive his own formula himself. The criterion for the correctness of the formulation of the attitude will be a positive emotional response and positive, physically and emotionally pleasant sensations.

After you are sure that you have clearly and clearly formulated / presented your desire, it is enough to remember the pleasant state that arises in the process of pronouncing / presenting it.

Reproduce this state as often as possible when the BRM is in your field (communication 1 OS → BRM is active), especially when you are talking on the phone and communication 2 is active (BRM → DCD).

4. Getting feedback

Each type of BRM has a different memory size, type, speed, translation strength, determined by the BRM parameters. Receiving a “response” is a sign that recording of your intention in the GEIS has begun. “Answer” is the beginning of the materialization of your desire at a subtle level.

Once you have formulated your intention, begin to watch closely for any manifestations in the GEIS. It can be anything you like: words spoken on a mobile phone; a broadcast or song on the radio; TV show, even “random” spam on the Internet. In GEIS, as a geometrically structured and interconnected space, nothing happens by chance. Several coincidences that resonate with your intention or desire are a signal that the recording of your intention in the GEIS has begun and its implementation will begin soon.

5. Result

After the realization of your intention in full, the crystal is partially discharged and is ready for further work.

BRM parameters

The parameters of the BRM crystal are determined by its electronic energy spectrum. The properties of BRM reflect those bonds of groups of molecules and atoms that arise during the interaction of the human field and the BRM field.

BRM parameters have their own frequency and geometrical characteristics, correlating with human consciousness. There are seven basic properties in the space that defines our three-dimensional world.

I. Spatial characteristics

A spatial characteristic is an area that represents certain energy characteristics. The spatial characteristic of the BRM is determined by the energy, dynamics, structure, and other properties of the crystal space.

The spatial characteristic of the crystal obeys the law of three-dimensional spatial periodicity. This is the energy that a person can interact with through BRM.

Inorganic space is not an empty virtual space, it is a space that has its own structure, geometry, its own laws, its own "doors" and "keys". Its geometry is the image of symmetric operations of discrete transfers - translations.

Spatial property is the first, initial property on which bioresonance depends.

It is the spatial characteristic that is responsible for the fact that different BRMs work in different ways. It depends on the spatial characteristics of the crystal to what extent a person can "settle down" in the GEIS with the help of a particular BRM.

By activating the crystal, you are connected to the GEIS. This is the interaction with energies of a higher order - bioresonance. A person begins to interact with the energy of the crystal, begins to perceive its language, its space and its capabilities.

In fact, the nature of the translation depends on the spatial property of the crystal, as well as on the frequency and symmetry. By creating thought forms in GEIS, we begin to order, modulate it.

It looks like a system of three-dimensional regular geometric shapes that an ordinary person is not able to see.

Crystal field

II. Symmetry

Crystal symmetry is the essence of geometric proportion. Symmetry can be called a “property of properties” of a crystal. The essence of symmetry is the ability to transform the space of the crystal, combining it with itself in a new quality. Symmetry, in fact, determines the strength of the crystal and its ability to enter into bioresonance with the human field.

With respect to different properties and at different levels of consideration - macroscopic or microscopic, purely geometric or energetic, in statics or dynamics - crystals can have different symmetry, including translational or spiral.

With the help of X-rays and neutron diffraction, 230 groups of spatial forms of crystal symmetry were revealed. For example, a quartz crystal can be aligned with itself by rotating 120° along the vertical axis 3 and by rotating 180° around the three horizontal axes 2_x, 2_y and 2_z.

Symmetry properties can be described as a function:

$$F(x, y, z) = F(\bar{x}, y, z) = \dots = F(\bar{x}, \bar{y}, \bar{z})$$

Diamond is an ideal crystal in terms of symmetry characteristics. This is one of the strongest crystals. A diamond is able to enter into maximum interaction with human consciousness.

Using a BRM based on diamond, a person can most obviously feel the interaction with the GEIS and achieve amazing results, but that is why a diamond crystal is characterized by a low hardness (2 - 2.5) and should be used by people who are experienced in working with crystals and with the utmost care.

Three-dimensional structure of a diamond crystal

III. Density

Crystal density is an important wave parameter. Density introduces additional conditions into the crystal system. The definition of a crystal is given in terms of syngony and density. The density index characterizes the ratio of the mass of the crystal to its volume. The strength, time and clarity of “understanding” of your desires, intentions and thought forms and its adaptation for the crystal of the gadget depend on the density of the crystal.

IV. Syngonia

The system is the inner space of the crystal, the material basis of its consciousness. Crystal system describes the microstructure of a crystal.

There are 7 syngonies in total: triclinic, monoclinic, rhombic, tetragonal, trigonal, hexagonal and cubic.

There is a pyramid of subordination of crystal systems, where cubic (g) symmetry is the highest, hexagonal (f), tetragonal (d) and trigonal (e) - middle, rhombic (c), monoclinic (b) and triclinic (a) - the lowest.

Crystals syngonia

The crystal system will determine the matrix of the crystal, or the quality of the crystal's consciousness. It is the syngony that determines the amount of memory, as well as the quality and nature of the broadcast. There are crystals that can accumulate a large amount of energy, there are crystals that begin to transmit immediately.

V. Angle characteristic

This characteristic depends primarily on the quality of the crystal symmetry. Here, an essential role is played by the interaction of the crystal with the external environment and the conditions for its growth. The angular characteristic is determined by the internal atomic structure of the crystal lattice.

In three-dimensional space, the angular characteristic is finite, and this is important, since after going through a full cycle, energy is either returned or transformed. It is the angular characteristic that determines the use of one or another type of BRM.

VI. Frequency characteristics

Each crystal has a voltage energy, which is determined by the periodicity of the distribution of atoms in three-dimensional space. In fact, this indicator depends on the space in which the crystal grew. Its implementation takes place depending on the terms of density, vectority and symmetry.

We have 7 kinds and 32 crystal groups - forms that come from symmetry conditions, and these forms can resonate vertically (C_{nh}), horizontally (C_{nv}) or obliquely (C_{nm}). Crystals of the first two forms are most often found. And depending on the properties of the resonance, we can have high-frequency or low-frequency bioresonance.

High-frequency resonance ($> = 220$ Hz.) Is suitable for solving high-precision, sports, energy-intensive, team tasks. Recommended for executives, athletes, businessmen. High-frequency crystals enable a person to receive information from inorganic space (clairvoyance and other psychic abilities).

Crystals with low frequency characteristics are suitable for solving individual and household tasks, such as finding self-harmony, work and career, personal relationships, improving health, etc. However, much depends on the task itself and the individual characteristics of a particular type of BRM. With varying degrees of effectiveness, any BRM can be used to achieve any goals.

VII. Structural characteristic

Not all crystals belonging to the same class perceive and store information in the same way. There are three types of crystal structural characteristics.

Crystals of the first type perceive information only positively colored and ignore the negative, the second type - on the contrary, they tune in only to negative energy and do not perceive positive. The third crystals belong to the group of neutral crystals - they accumulate any information while remaining uncharged. It was found that most of the crystals of any class belong to the neutral group.

The uniqueness of BRM lies in the careful selection of natural crystals, which, due to their structure, ignore negative information

(which in any person seeps through the subconscious in the form of an uncontrolled internal dialogue) and actively accumulate positive information (happiness, success, prosperity, love, self-development, etc.)

Interaction with body systems

Entering into resonance with human consciousness, BRM also supports and enhances certain functions, systems of the human body and can be used for healing and individual recovery. BRM perceives functional systems not as something separated, but as different human bodies with step-by-step changes in frequency characteristics at the transition.

1. The endocrine system is viewed through the center of its formation (a gland located in the abdomen of a man and in the uterus of a woman). This is a truncated body.

2. The circulatory system, which depends on spatial (external) energy. It corresponds to a body of volume.

3. The skeletal system, or the body of tension.

4. The muscular system, or the body of rotation. It is an inertial system.

5. The cutaneous system, or body of tension.

6. Tendon system, or body of collection.

7. The human brain and nervous system form a resonant body.
